"BRUSH IN"—Wasatch school children were given expert advice on how to brush their teeth and information on dental hygiene under state-wide program of health dept.

"Brush In" Gives Students Insight Of Dental Hygiene

Orson D. Wright, D.D.S., Director of the Dental Health Section, Utah State Division of Health recently stated that approximately 98% of all people suffer from the most extensive disease of man — dental decay. Fifty-nine percent (59%) of the children of Utah need immediate dental care and about half of our children don't go to the dentist.

Something new has been added in Utah to partially prevent the destruction of the most widespread disease of mankind or dental decay. The new program is called "Brush In."

Topical Fluoride Method The "Brush In" or Self-Application Program sponsored by the County Health Departments and School Districts in many areas of the state is a special topical fluoride method and has as its objective the reduction of dental decay. The program is conducted in cooperation with local practicing dentists and includes giving the child a toothbrush and teaching him a proper method of brushing his teeth under supervision using a special fluoride paste.

The "Brush In" Program was first initiated in Utah in the Fall of 1969 by the Dental Health Section of the Utah State Division of Health. Such programs have been carried out in Emery and Uintah Counties and are planned in several other counties this spring.

Dr. Wright says that "Brush In" Programs are being conducted in many states in the country with unusual success. Results of studies using these particular fluoride preventive pastes are published in North Dakota and Indiana and they exhibit a substantial reduction in decay.

In Utah the program is expected to produce noticeable and substantial reduction of decay as found in other states for a cost of approximately 25 cents per child.

Self-application procedures must be done at least yearly to replenish the fluoride which will wash out of the teeth. Although reduction of dental decay might be noted, Dr. Wright cautions that this procedure is only a secondary and less effective program to the permanent fluoridation of water supplies which can prevent 65% or more of dental decay.

Volunteer PTA Help

The Wasatch County School District carried out the "Brush In" Program recently in the elementary schools with volunteer PTA help and the support and cooperation of the Local Dental Profession, and the Co. Board of Health, and Maren Dutsch, School Nurse.

An orientation class was held for all volunteers by Kathy Lulken, State Dental Hygienist. Without the women who volunteered to assist, this program would not have been possible.

Those who volunteered are: Kay Anderson, Myrna Vernon, Brenda Price, Joan Shipley, Nedda Duke, Joan Budd, Audrey Probst and Joyce Dudley. The school district is grateful to them.

Ezra Van Wagoner, County Clerk
Wasatch County
Courthouse
Heber, Utah 84032

Dear Mr. Van Wagoner:

We enclose five copies of Rider No. 1 to your General Health Contract No. 6493 for the period April 1, 1972 through June 30, 1972.

This Rider increases the percentage participation by the State Health Division for the period indicated, but does not increase the dollar amount of your contract.

A review of your past nine months' expenditures indicates a probable loss of funds through the lapsing provision in your contract. This Rider is to insure that the total dollar amount provided in your contract will be available to you for the Fiscal Year 1972.

Please sign and return all copies to us immediately in order that they may be processed in time for payment to you during this fiscal year.

Sincerely yours,

Lyman J. Olsen, M.D.
Director of Health

Strawberry

By HACK MILLER
Deseret News Sports Editor

HEBER — The Strawberry Reservoir will be open to fishing again this year.

Owners and controllers of the lake, the Strawberry Waterusers Association has decreed it, agreeing to meet the sanitary requirements as set down by the Utah State Board of Health.

The waterusers met with all interested agencies, including the Wasatch County and State of Utah Boards of Health there Wednesday and agreed to increase sanitation facilities at the lake to take care of the opening-day throng on June 6.

It had been suggested, as a result of department of health surveys, that the lake be closed until such sanitation facilities were provided.

The users assured the state and county health officials that they would have at least one toilet facility per every 100 fishermen who are at the lake.

Dr. Larry Duke, chairman of the Wasatch County health board, conducted the hearing.

Health officials pointed out that certain minimums were presented to the camp operators as far as restaurant and sanitation requirements were concerned and that they would nail a "closed" sign on those camps which did not comply.

The waterusers, represented by Art Finnley, president, said that if the camp owners

didn't meet all requirements they would have their licenses lifted — even for this season.

The Forest Service reported it has its own campground at Bryant's Point — space for about 60 parking spurs. Regular Forest Service user fees will be charged for these and they are separate from the regular campgrounds, operated by the Strawberry Waterusers Association.

Finnley said that the users have lost money on the campground operation each year. They took in about \$5,000 last season. They also collected about \$12,000 in boat fees.

However, he said that with the lease arrangements on the property the users made a 35 per cent profit for the year —and this amounted to about \$12,000.

"Every business is entitled to a profit," he said.

Bureau of Land Management officials reported that the bid for the dam will be opened this fall and that it will take about three years to build the new dam. It will take another four years to bring the water up to where the camps will be moved — that is seven years away.

In the meantime the state health authorities have said that the lake can only be operated as a fishing and recreation place if the waterusers maintain the prescribed standards for health and sanitation.

The meeting was a peaceful one. And that hasn't always been the case with the Straw-

Picture Brightens

berry rights meetings.

"It is difficult to plan to put into the area any permanent facilities when you know that within a few years all facili-

ties will be gone," Mr. Finnley said.

By then, fishing crowds might not be a problem. Fishermen gather only where the

fishing is good. There is no guarantee that the new Strawberry, deeper and larger, will be the attraction that the lake has been as its present size.

Thanks Expressed to PTA for Assistance

June 1, 1972

As the school year comes to a close, Maren Duttschi, PHN, wishes to thank all the volunteers who assisted in the many areas of the School Health Program. None of the programs could have been carried on without the cheerful, able assistance of the many women of Wasatch County who gave so willingly of their time.

The program included the Amblyopia Clinic, Immunization Clinics, Vision Screening, Tuberculin Skin Testing of 8th grade students, The Maturation Program and the Dental Brush-in.

Provo Herald
12 June 1972

BYU Wins Grant To Research Strawberry Area

PROVO — Brigham Young University has received a \$2,500 research grant from the Uinta National Forest Service in connection with proposed future developments for the Strawberry Reservoir area.

Dr. John R. Christiansen of the BYU Sociology department will head the research team which will study future possibilities for Strawberry as a recreation site.

Forest Service officials anticipate the water level at Strawberry to rise in the next five years upon completion of the Soldier Creek Dam, and many of the existing camping areas will be under water.

MEET NEEDS

This area is extremely popular with residents of Utah as well as other states and the Forest Service is anxious to implement a plan that will meet the needs of all concerned.

"We are attempting to open

this up to public opinion," said Bill Hoover, contracting officer for the Forest Service. "Although it will be five years before we anticipate any problems, we want to be sure and be prepared for the new water level."

CHECK ATTITUDES

"We are particularly anxious to find out the attitudes of cabin owners in the area. Their recommendations will be invaluable in forming a plan of action."

Christiansen's group will assume the responsibility of obtaining opinions and recommendations by mailing questionnaires to a random sample of 300 cabin owners in the Strawberry area.

The project is expected to continue through August, when the data will be compiled and the conclusions will be handed over to the Forest Service officials.

MINUTES OF THE WASATCH COUNTY HEALTH BOARD

June 12, 1972

12:00 Noon

Flying Vee Cafe

Present were: Chairman, Dr. Larry B. Duke; Public Health Nurse, Maren Durtschi; Sanitarian, Clyde Broadbent; Douglas Merkley, Douglas Edwards, Commissioner Russell Wall and NaDene Probst.

Minutes: Minutes of meeting held April 20, 1972, were read by secretary, Nelda Duke, and approved by the board.

A letter of thanks and appreciation was signed by each board member and will be sent to Georgia Dawn Clegg for her services as a board member. (See attached copy.)

Dr. Duke welcomed our new board member, NaDene Probst, who has been asked to serve a 3-year term on the health board.

Comprehensive Water-Sewer Plan: Mr. Merkley suggested the county look toward a comprehensive water and sewer plan for the county. Commissioner Wall stated such a plan is being considered.

Food Hand-
lers T.B.
Testing: Mrs. Durtschi reported a TB testing program is now in progress for foodhandlers who work in summer months.

Mrs. Durtschi stated a letter had been sent to cafe establishments concerning foodhandlers wearing hairnets, bands or other coverings over hair while working around food. (See attached copy.)

Dead &
Useless
Animals: Mrs. Durtschi also reported she had checked with Mr. Keeling on the disposal of dead and useless animals. He will pick up horses and cows without charge but will charge \$2.50 for calves and sheep. When he is unavailable county residents can call Spanish Fork for this service.

School
Health: Mr. Merkley stated a physical exam will be required of all pre-school children, bus drivers, and lunch personnel prior to beginning of 1972-73 school year.

First Aid
Classes: Mr. Merkley also reported the First-Aid class was very successful and each school now has enough trained personnel to organize a first-aid team within each school.

- Sanitation: Mr. Broadbent reported he had checked on the Stardust and Schleuter sanitation problem and both have been corrected. He also reported he and Mr. Michie had condemned three septic tanks on new installations. It was reported that a trailer court is being installed in Soldier Summit. Commissioner Wall and Mr. Broadbent will check into this matter.
- Building Permits: Mr. Broadbent reported he had issued permits for 1,197,800 dollars worth of buildings in the county. Of this amount 150 thousand dollars are in Heber City.
- Pine Hollow: Mr. Broadbent reported Pine Hollow is doing a good job in development. They have dug three new wells and installed a water storage tank and have a power system underground. They will be able to use septic tanks.
- Strawberry: It was pointed out that Strawberry Water Users have now removed most of the toilets they installed at strawberry and have refused to honor commitments they made at previous meetings regarding renting toilets, taking care of garbage and not hooking up new cabins and trailers around the area. The board has received no help from the state as to putting an injunction on SWU. Therefore the board felt the next alternative will be to check with the US Forest Service and do what we can to accelerate the moving of cabins and trailers away from the shore line. Dr. Duke will check with the forest service in this matter.
- Nuisance: Mr. Merkley asked who enforces nuisance law for noise made by motor bikes.
- Next Meeting: Next meeting is scheduled for July 10, 1972.
- Meeting adjourned at 1:30 P.M.

Chairman

Vernal, Utah
July 5, 1972

Mr. Charles Longsen
Currant Creek Lodge
Fruitland, Utah

Dear Mr. Longsen:

Wednesday, June 28, 1972, an inspection was made of the Currant Creek Lodge Cafe and the lounge. Copies of the inspection sheets showing our findings are attached to this letter. You were not there and we felt we should send these reports through the mail with our explanation of the violations. Following are the findings item by item:

Lounge Area:

- Item 12 - Eggs out of refrigerator. Eggs, whether cooked or not must be refrigerated.
- Item 24 - Vapona strips are not used in areas where food is prepared or served.
- Item 46 - Apparently improper use of glasses, mugs, etc. is being carried.
- Item 54 - Glasses were not stored properly - they should be inverted onto mats for this purpose.
- Item 59 - The water supply is not approved and never has been - and because of this, item #62 is from an unapproved water supply, item #62 is from an unapproved water source is a nuisance.
- Item 63 - The ice machine is not properly maintained and running on surface of ground outside creating a nuisance.

Item 64 - Ice not properly handled by scoops - glasses used to scoop up ice.

Item 74 - Toilet rooms, fixtures, vestibules were dirty and needed policing more often.

Item 80 - Hand wash sink was dirty.

Item 90 - Floors throughout the lounge.

Item 101 - Lighting was not sufficient in the rest room area.

This covers the Lounge area. Below is the report of the cafe known as Currant Creek Lodge Cafe:

Item 8 - Food stored in refrigerators uncovered.

Item 10 - Refrigerators had no thermometers. Thermometers must be in each refrigerator. There is no other way you can tell if refrigerator is working correctly.

Item 12 - Refrigerators were not operating correctly. Temperatures were not cold enough and at too high temperatures is hazardous.

Item 21 - Potato scoop was not in running water correctly. Ice cream dippers and potato scoops are stored in running water bath or refrigerator when not in use.

Item 24 - Vapona strips - this insecticide is not considered hazardous if used where food is prepared.

Item 29 - Waitresses did not have hair nets or other restraints.

Item 31 - Meat block was dirty and needs repair and cleaning.

Item 32 - #10 cans are not to be used for anything except the food that came in them.

Item 38 - Sieves and other equipment used in kitchen were not clean.

Item 40 - Shelves in storage area were not clean. Shelves in the refrigerator needed to be cleaned.

Clinic Vaccines Still Available

There are 116 cases of tetanus in the United States in 1971. In 1968, 86 people died due to tetanus. So...Are you Immunized Against Tetanus?? This disease is characterized by severe, painful muscle contractions of the facial muscles used in chewing, thus the name of lockjaw is commonly used. The back muscles may also be involved. The tetanus spores are found in dust or dirt and enters the skin through a wound or burn. If infected, it will take from 3 to 21 days for a person to develop the disease. Those who have been immunized against tetanus should have a "booster" at the time of injury. Three injections given one month apart and one year later with boosters every three years for immunity to this very painful and often fatal disease.

Diphtheria, a very serious disease, is still with us. There were 215 cases in 1971 and 30 people died from it in 1968. It infects the nose and throat and may cause such swelling as to obstruct breathing to the extent the airway or opening must be made in the neck.

Immunization of infants includes this in the DPT (diphtheria, pertussis whooping cough, and tetanus). Children 7 years of age and older should receive boosters of DT in order to maintain immunity. Older children and adults who have neglected this can become immune to both diphtherial and tetanus (Instead of just tetanus) by having DT immunizations 4 to 8 weeks apart, and one again a year later and then one booster every 3 years. These vaccines are available at the clinic. There is still time to start your series. Clinic dates: March 30, April 13 and 27, and May 11.

Provo Herald 8 Sept. 1972 Lawsuit Filed In Strawberry Fish Squabble

Strawberry Water Users Association, through its attorney Dave McMullin, today was filing suit in Wasatch County against the State of Utah and the Utah State Division of Wildlife Resources in a dispute which has been going on for two years. The argument over who is responsible for care of facilities for the estimated 20,000 fishermen who use Strawberry Reservoir exploded into the open

this summer when the Water Users Association removed restrooms around the reservoir.

The civil suit being filed in Wasatch County claims that on June 3, 1971, the water users, by a written agreement, leased to the Division of Wildlife Resources the Strawberry Reservoir and 48,000 acres of land for the sum of \$2000. The lease extended to April 1, 1972.

By virtue of that agreement and lease, the Division of Wildlife Resources took possession and occupation of the reservoir and has continued to hold possession, despite the fact that the lease has now been terminated, the complaint states.

The complaint charges that from April 1, 1972, to the present, the DWR has stripped the spawn from fish in the reservoir, well knowing that they should not do so by law, and without the permission of the association.

In a second cause of action, the water users claim the DWR has refused to give up possession of the lands and structures and continues to hold them without permission of the plaintiff.

The water users ask the court to give them judgment for the reasonable value of spawn stripped from the fish from April 1 to the present time.

The association also asks for payment of reasonable value for use of the land and premises since that date, and for restitution and possession of the premises.

The complaint asks that the amount due for damages be trebled, plus interest and cost of the suit.

Mr. McMillan said the water users and DWR had a contract for more than 16 years whereby the state would pay a flat fee for maintenance of the facilities.

He declared that a cost study of the maintenance revealed that the 1,400 stockholders of Strawberry Water Users Association were paying out \$5,000 per year for a man, truck and equipment necessary to maintain.
